

Excellence in Delivery

We pride ourselves in offering global delivery options that encompass on-shore, off-shore, and project-based resources.

With our expertise in BI/DW, SAP Integration and Consulting, Technology Integration and Operations, Talent and Learning Management, Quality Management, and Management Consulting, VIP can offer complete delivery support.

Through our leading-edge design and implementation methodology, The Matrix Methodology®, we deliver consistent, repeatable, and well-documented projects.

Challenge Boundaries

Companies have made significant technology investments to strategically understand what drives their business and motivates their customers. In the process, they have accumulated large volumes of data dispersed across disparate systems making it difficult to evaluate, integrate, and maintain. It has become increasingly difficult to derive meaningful information from business data in order to effectively monitor and proactively manage the performance of the business operations.

Uncover New Possibilities

VIP's Business Intelligence and Data Warehousing (BI/DW) solutions diminish the boundaries of technology by bringing sustainable processes, proven experience, and an outstanding track record of uncovering new possibilities. The significant advancements that have been made with technology allow for new opportunities and enable strategic technology decisions to pay off. Active warehousing, near-real-time integration, and service-enabled warehouses are real options for the dynamic organizations in today's competitive environment.

VIP leverages business strategy and process expertise together with extensive Business Intelligence, Data Warehouse and Data Quality experience into an efficient Master Data Management (MDM) approach. A series of best practice activities bring together business stakeholders and IT sponsors into focused teams that get quick results while providing for long-term success.

About VIP

Established in 1996, VIP is a global technology and outsourcing firm that has provided solutions for over 900 clients in multiple industries as well as Federal, State, and local government. VIP helps companies challenge boundaries and uncover new possibilities to increase productivity, maximize revenue, improve performance, mitigate risk, and reduce costs. With nearly 1,000 staff, VIP offers expertise in Business Intelligence and Data Warehousing, SAP Integration and Consulting, Technology Integration and Operations, Talent and Learning Management, Quality Management, and Management Consulting. VIP's corporate headquarters is located in Folsom, California with offices in Sacramento, Minneapolis, Denver, New York City, DC Metro, Houston, Dallas, and Bangalore, India.

VIP's Business Intelligence and Data Warehouse solutions include the following:

Strategic Services

VIP's Strategic Services rest on the experience of our people and proven best practice approaches for uncovering and defining optimal analytic solutions. Our seasoned staff utilize this foundation to deliver visionary solutions around architecture, delivery, security, project rollout, and more. VIP has highly customizable, client-specific offerings that dig deep into evaluating and recommending solutions around key business and architectural components of your environment.

Business Intelligence

VIP helps clients identify business and technical drivers, standardize on the definition of Key Performance Indicators, and implement the complete BI life cycle to effectively deliver high-quality information for the business.

Data Warehouse

VIP's mature best practice approach is proven to deliver standardized, repeatable, scalable architectures and solutions. Our offerings span technical architecture and strategy recommendations, data architecture, data quality expertise, ETL architecture and development, as well as full data warehouse life cycle design and development. We have extensive experience helping clients upgrade their technology environment while bringing them up to speed on the value and capabilities.

Program and Project Management

Methodology is essential to the success of BI/DW initiatives. A consistent, repeatable process tied to effective strategies includes iterative delivery processes necessary to sustain the changes in the software development landscape. From strategy and planning assessments, to full project implementations backed by The Matrix Methodology®, VIP is able to arm its clients with the tools and processes necessary to sustain and deliver business value.

Training

VIP helps clients to become proficient and self-sufficient. We offer both public and on-site custom classes for data warehousing, data architecture, and business intelligence solutions. Our experienced instructors have training backgrounds combined with real-life knowledge, which increases the value of the classroom experience.

InnerCore

The InnerCore is VIP's free electronic online community for the data warehousing technologist containing valuable information about data integration, data warehousing or business intelligence issues. For more information please visit: www.vipconsulting.com/icore.
