

The only thing constant is change. With the current state of the economy most IT decisions are made based on conservative reasoning and tied directly to ROI. One of the single most effective strategies that IT must adhere to is keeping costs down, and value up. With smaller staff structures and more aggressive business needs, IT must turn to experts for help as they become more agile and nimble to support the needs of their company.

This is why more and more companies are turning to Visionary Integration Professionals (VIP) for help with SAP services. Our dedicated SAP Practices help companies extract the highest value from SAP technology by providing unequivocal infrastructure, product, technical and functional expertise, helping to deliver the value and flexibility that SAP has to offer.

Integrated Services, Proven Expertise

Our SAP Technology Services brings focused expertise to the prime applications that comprise the SAP Business Suite. Whatever your requirements - implementation, upgrade or single application enhancements - VIP can deliver services and/or solutions that align with business objectives.

VIP has helped many clients, large and small, implement and support SAP. We are focused on providing SAP services as one of the leading partners to SAP America. Some of the world's largest corporations, as well as fast growing small business enterprises use VIP to help solve business problems through innovative and cost-effective SAP initiatives. Our experience gives us the knowledge to identify and address business process issues in a way that suits specific needs and budgets. Our methodology includes full collaboration with our clients to develop an approach tailored to specific requirements.

The Right Experience. The Right Resources.

It takes more than just expertise to deliver quality work. It requires a depth of knowledge and a wealth of resources to choose from. VIP's Technology Services practice leads have an average of 15 years of business and IT experience, and at least five years working with SAP. This equates to industry expertise and technical savvy. With VIP, you have selected the right partner to support your SAP requirements.

Global Delivery

VIP's experience in global delivery has resulted in a model that allows our team to blend onsite, remote and offshore skills and capabilities with clients' needs and requirements. Many factors are at play as we define the right global delivery team - all of which are controlled by the needs of our clients. We typically utilize onshore area-specific team members for planning, management, and collaboration. Off-shore resources are usually allocated as part of IT execution.

What makes this work: seasoned experience by our practice leads, and extensive history of teamwork within VIP.

ABOUT VIP

Established in 1996, Visionary Integration Professionals (VIP) is a global technology and managed services firm that has provided solutions for over 900 clients in multiple industries as well as federal, state and local government. SAP BusinessObjects® and SAP Business Intelligence: SAP BI allows you to consolidate your enterprise wide data into a single platform for better visibility, delivering unprecedented operational insight support your business decisions. VIP provides the vision and strategy to get you there with SAP BI. Strategic planning, Roadmap services, Solutions design, Reporting and Analytics visualization, Infrastructure planning - sizing and implementation, and Business Objects architectural design services, VIP has the experts to implement your vision and increase your ROI.

SAP NetWeaver® Applications: SAP NetWeaver lowers total cost of ownership, enabling your company's SAP environment to integrate information and applications from any platform. It aligns people, data and processes for total business integration across organizational and technological boundaries.

SAP NetWeaver Infrastructure: Our core focus is on application lifecycle management, ensuring that your SAP and Business Objects applications are performing to industry standards and system architecture is implemented to SAP best practices. We provide full Solution Manager implementation services as well to optimize your SAP environment and ensure it's running at peak efficiency.

SAP ERP Upgrades: Our SAP Upgrade Practice has been implementing successful SAP Upgrades for years. Our highly efficient upgrade automation tool and analysis methodology helps us determine the processes required to successfully modify 'mission critical' applications with minimal impact on day-to-day business. We offer a no-cost SAP Upgrade Workshop that is designed to help you understand your upgrade options, costs, and the value proposition associated with a SAP upgrade.

SAP BusinessObjects GRC and Security: Solutions for governance, risk, and compliance (GRC) in SAP promote business sustainability by integrating and unifying corporate governance, enterprise risk management, and compliance to the various control regimes across the extended enterprise. VIP offers a comprehensive GRC solution that provides the fundamentals to breaking down the silos of control, risk, and compliance information across the enterprise.

SAP Customer Relationship Management: Our integration, implementation and training capabilities help you connect with your customer engagement cycle so that you can manage marketing, sales, service, analytics, field applications, interaction centers, e-commerce, and channel partners.

SAP Supplier Relationship Management: Backed by our product expertise, we take the time to understand your objectives so that we deliver an SRM implementation tailored to achieve your vision. Our strategic consulting and implementation services target increased supply chain visibility, streamlined yet robust sourcing, increased collaboration with suppliers, and automated procurement processes across the enterprise.
