

Visionary Integration Professionals

# Technology Integration

## Challenge Boundaries

The right technology has the potential to increase revenue, reduce costs, improve efficiency and enhance customer satisfaction. At Visionary Integration Professionals (VIP), we understand that clients define success through measurable business objectives and outcomes. That's why our technical integration and consulting services are geared toward helping organizations solve business problems and increase results, from the bottom line on up.

## About VIP

Established in 1996, Visionary Integration Professionals (VIP) is a global technology and outsourcing firm that has provided solutions to over 900 clients in multiple industries as well as federal, state and local government. VIP helps companies increase productivity, maximize revenue, improve performance, mitigate risk, and reduce costs. With nearly 1,000 staff companywide, VIP offers expertise in the areas of Business Intelligence, SAP Integration and Consulting, Technology Integration, Learning and Talent Management, Quality Management and Management Consulting. VIP is headquartered in Folsom, California with offices in Sacramento, Minneapolis, Denver, New York City, Alexandria, Houston and Bangalore, India. ## Uncover New Possibilities

VIP's Technology Integration solutions offer sustainable processes, proven experience and an outstanding track record of guiding organizations to make strategic technology decisions that pay off. We innovate in areas of architecting, developing, and delivering solutions that help automate, integrate and streamline your business processes. We help you uncover new possibilities while complementing and leveraging your existing systems. We use best practices to minimize software complexity and extend your development dollars to re-engineer business applications that are often out of date and time-intensive to manage.

## Excellence in Delivery

Our senior-level professionals offer decades of experience. Since VIP was founded, we have been developing methodologies and techniques based on industry best practices to aid our consultants and our customers in delivering world-class solutions. We pride ourselves on offering global delivery options that encompass on-shore, off-shore, and project based resources. Our goal is to provide the most optimal solution for our clients. Through our leading edge design and implementation methodologies, we deliver consistent, repeatable and well-documented projects.

## Technology Consulting Solutions

### Software Engineering

We understand that you need reliable and functional technology and information systems in order to conduct business. We can engineer software applications to align with your strategic and operational needs and to maximize value to your business. We listen well and work hard to understand your business requirements. We know this translates into increased revenue, improved efficiency, cost savings, and ultimately, customer satisfaction.

### Enterprise Application Integration (EAI)

EAI enables companies to leverage best-of-breed applications and systems across the enterprise rather than forcing your business into a one-size-fits-all ERP. It enables the development of leading edge eBusiness applications, while extending the life of your legacy systems and related technology investments. It can also extend and integrate internal systems with suppliers, partners, and customers, as well as reduce costs, increase efficiencies, and allow you to respond quickly to changing market conditions. We can help you design and execute an EAI framework that allows your business to open its "silos" of information and integrate end-to-end business processes.

### Web Analytics & Collaboration

While many organizations have begun to understand web analytics, we often see deployment and tracking focused on web page "hits." While this is certainly an important first step, to get to the next level, clients need to understand how the users are actually interacting with the application. VIP offers solutions and expertise to help you better understand web transactions, traffic patterns, and individual user experience to help you make more informed business decisions.

### Systems Operations & Maintenance

We help our clients succeed beyond solution implementation. We offer a full range of System Operations and Maintenance services supporting large-scale, mission-critical applications and databases (Oracle, MS SQL, Siebel and SAP). We deliver with confidence and report results based upon achievement of required business objectives and service level agreements. We provide logistics and key performance metrics on an ongoing basis while supporting business functions 24x7.

### Technical Assessments

Neither technology nor the needs of an organization remain static. We perform Technology Assessments to compare a client's current technology to their requirements, industry best practices and new solutions. From server consolidation, security architecture, performance, total cost of ownership, staffing and SLA's, our experienced technologists can offer analysis, recommendations and a road map for change.

### \* Industry experience makes a difference
